

Device and System Requirements

Device Requirements

Students can take the assessment using a range of devices that are generally used for instruction including:

Devices

- Apple desktops, laptops, or iPads
- Windows desktops and laptops
- Chromebooks

Operating Systems

- Supported browsers are up-to-date versions of Chrome, Edge, Firefox and Safari.

Virtualized environments are not supported.

Minimum Device Capacities

- Cumulative processor speed is greater than 233MHz.
- Total RAM available is greater than 256MB.
- At least 50 MB of available storage.

Permitted Peripherals (Not Required)

- External Keyboard - Wired or Bluetooth
- Mouse/Trackpad - Wired or Bluetooth
- Microphones - Microphones are not needed for this assessment (unless remote proctoring)

Network Requirements

Connection to the Internet

- Internet connectivity is required for all devices throughout the duration of the assessment.
- Test-taking devices can be networked via wired or wireless connections.
- ADAM is a lightweight browser-based application that is not bandwidth intensive. There are no required bandwidth minimums, however 5-10MB per second per student is a general rule of thumb for online assessment.

Device and Network Preparation

URL Whitelist

ADAM needs the ability to communicate with applications and services to properly perform. To ensure those services are not blocked by things like a network firewall, we require that the list of URLs is whitelisted through your network. You can test to see if the network allows traffic to these sites by accessing each of the listed URLs. If you cannot get to the site, then contact your school's IT team.
